

The New Earth at The Year 2023

Part 1

The New Earth is very much ready for us to come over. The ones who already are there really love everything on this green, fresh and lush planet. They have a lot of beautiful forests and jungles, but also high mountains, soft hills and big open fields. The lakes and oceans are clear blue and streams and rivers are glittering in the sunlight. The temperature is different depending on where we visit, but there is mildness in the feeling and wind. Right now is the peak season for all the nice fruit trees to share their abundance of fruits and berries, they are so much bigger over there. Strawberries and many other berries grow on trees and are easy to pick, no bending over. An enormous amount of new fruits and berries, but also vegetables have been introduced from World 2, the ET planets. They carry a lot of protein, vitamins and minerals that our bodies need. The New Earth people and animals don't hunt or eat meat, fish, etc. so all living creatures are safe from harm. But still you can be served plant based meat and fish that taste exactly the same as if it was real. Mostly though, humans on The New Earth have developed a brand new food and taste palette, very different from ours down here.

So, what do they do for fun? They love to spend time in nature hiking or at sea on boats or in water swimming. A lot is about having fun and enjoying life. They also read a lot and learn new things or take classes in everything you can imagine. They look at new movies made up there and visit really, really big Theme Parks that are everywhere and offer a lot of fun to both see and try. Then some like to take a short vacation somewhere else in the Universe, which happens in a modest way and not too often.

Many live in their own house, sometimes more build with an ET look. Most items needed are delivered directly home for instance; drinking fluids are delivered from outside of the house directly into the refrigerator. Transport and traveling are done with small personal vessels, not looking like cars, busses, trains, etc.

The New Earth people and animals all work with something they like or are interested in. Yes, even animals work, but in ways we down here don't seem to notice. Except for maybe ants building nests, bees pollinating, horses for riding or pulling things, specially trained dogs, etc. On The New Earth animals play an important part in other ways, not only in nature, but also in the human society in general.

On The New Earth we have adapted to be awake for longer times, the day is long as well as the night. The difference is that we also are awake in the long, long night, simply because we can't sleep for the entire night. So, we eat and party with friends or go dancing, or we go out looking at the stars and smell the smells of night, maybe visit a movie place or see theater or dance

performance or go to a Theme Park. The Theme Parks are many and they all offer different and exiting things like; Winter Wonderlands for fun playing or skiing in the snow, Mickey mouse and Donald duck with friends from earthly cartoons, Under the Sea diving and exploring, caving experiencing with digging for treasures, and of course thousands and thousands of different rides and entertainments, etc. Yes, the night is open for fun and up there everyone has the stamina to have fun and enjoy life. No one is tired, sick or moody, and no one is alone or without company of loving friends and families or a loving partner. All is good and nice and everyone is happy and content with their lives on The New Earth.

The New Earth at The Year 2023

Part 2

As I said before in the first part, The New Earth people, animals, nature and everything there are very much ready for us to come over.

On our side, on this Earth, there is a big change going on. For myself I see it clearly within all the teachings and class materials I have. Now new things are constantly added to the old class materials and I and everyone else need to adapt to all of the changes with totally new knowledge. It has really speeded up, with constant changes in the old class materials, very quick changes occurring from one week to another. It is hard to follow all the new things and their new rules, in how to still use some of the old stuff, how to adapt and take in the new and how to work with everything old and new together.

At the same time there is a massive and ongoing procedure of bringing out people, mostly those that previously had signed up, for going out in the Universe with the ET's. They are going out to different planets, but it is not for sightseeing. All of the people are going out to be educated, so that they can help their fellow humans, animals, etc. before and during The Big Shift. This, for creating a really great, calm and nice transition to our new lives on The New Earth. When I look at this development, I see it as if we now are getting really close to The Big Shift over to The New Earth.

I was working with bringing out quite a bit of people to the Universe, but had to tell the ET's that I had too much on my plate right now. So, I got a bit of a break from it, at least for now. I didn't want to be bringing out people that I didn't know or had educated myself. I said to them, I only would work with "my" people or my already known connections. Even then the workload will be very big for me. So, in this case I hope The New Earth comes quick, so I bring people out from there, instead of here. Then, there wouldn't be any hidden things or secrets among people, everyone would know if their spouse or friend needed to go out and the rest of the family or friends would be okay with it and understand.

When going on a trip from The New Earth to the Universe, it can be "allowed" for the traveling person to spend more time out there, so the person can then learn much more on their trip. All of that knowledge can then come to good use, for all of the newcomers on The New Earth. Going from there maybe also will allow us a little bit more time for relaxing, exploring and do some universal sightseeing trips.
